

«MOOVE: a seat that moves the whole body, increases the productivity and well-being of the user!.»

LIMIT RISKS

fight against a sedentary lifestyle

Following many studies, the sitting position will increase the risk of having heart problems while reducing the life expectancy of 7 years. Indeed, the human body is designed to "move", not, to stay almost motionless for 9 hours a day. Ultimately, this position disrupts the entire body (less oxygenated) which causes an increase in fat cells causing a potential overweight.

A DYNAMIC BASE

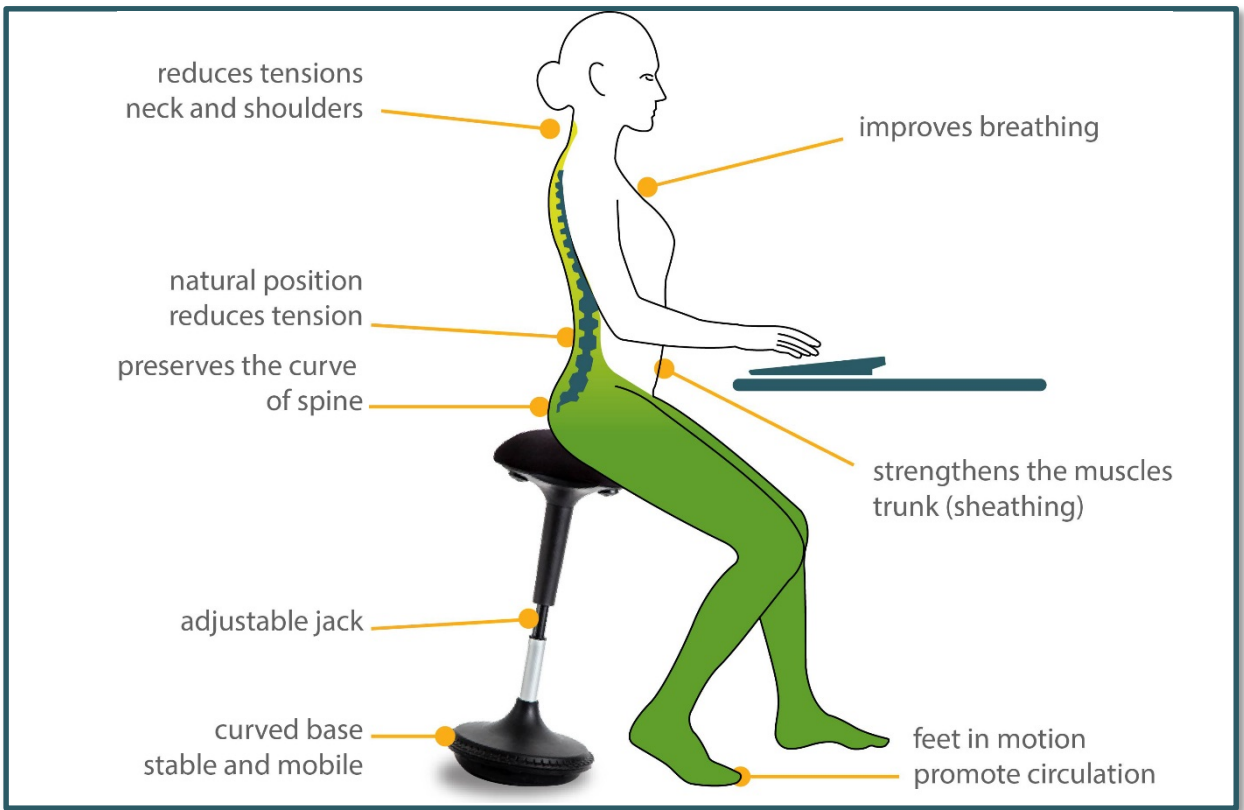

Ergonomic and comfortable

Its curved foot promotes a dynamic posture and provides great freedom of movement to adopt the correct posture without hindering movement. The MOOVE seat is ideal to avoid back, lumbar and muscle pain (shoulders, arms, back). Thanks to a perfect alignment of the spine, the whole body "benefits". Indeed, the weight on the basin is reduced, the airways are "open", the cladding is stressed and the blood circulation is much more fluid. In the end, it is proven that sitting / standing stools have a positive impact on productivity, creativity and overall concentration.

We burn 3 times more calories while standing (without walking) than sitting behind our desk.

THE ADVANTAGES

The MOOVE seat has a large clearance and can be adjusted in height from **52 cm to 81 cm** thanks to its high quality gas cylinder, guarantees **15,000 manipulations**
